

TUBULAR INSPECTION SERVICES

Effective maintenance of drill pipe and associated hardware ensures the continued and safe operation of a drilling rig. An appropriate tubular inspection program helps identify integrity issues before they reach criticality, preventing costly repairs and / or damage to personnel and the environment.

Inspecta International offers a comprehensive tubular inspection service, covering all new and used items, including;

Drill pipe, tubing, casing, sucker rods, coiled tubing, drill collars, bottom hole assembly, cross over subs, pup joints, reamers etc...

A typical inspection program involves one or more of the following:

- Visual inspection of body & threads,
- Thread cleaning & dope application,
- UT wall thickness measurements & dimensional inspection,
- MPI to identify cracks & other defects,
- Hardness testing,
- Internal inspection of upsets – MPI,
- Tool joint inspections – VT & dimensional,
- Drifting assessment,
- Pad eye inspection – MPI,
- Traceability,
- Quality assurance.

All inspections are carried out in accordance with client requirements and per the specified standard (API, DS1 etc). *Should you require further information regarding our Tubular Inspection services, please contact Inspecta International by emailing technical@inspectagroup.org, or contact your local office who will be happy to answer any queries www.inspectagroup.org*
